

FlipPulse turns the 96 daily 15-minute Bitcoin markets into a hands-off, rules-based engine that trades your edge for you. This guide shows you **how it works** and asks you to pick **one starting strategy mode**. You'll begin in **paper (practice) mode** — no real money at risk until you say go.

HOW IT WORKS — SIMPLE 3-STEP FLOW

- 1 Connect.** Link your Kalshi account securely (API keys, read-only where possible).
- 2 Configure.** Choose your risk level, capital allocation, and preferred strategy mode (Conservative / Balanced / Aggressive).
- 3 Pulse.** FlipPulse monitors every 15-minute window, executes high-probability Up/Down trades automatically, and compounds your edge.

FEATURES

- ▶ **Real-time Pulse Engine** — analyzes order flow, momentum, and on-chain signals for each 15-min candle.
- ▶ **Smart Position Sizing** — Kelly-inspired risk management to protect and grow your bankroll.
- ▶ **Live Dashboard** — beautiful real-time performance visuals, trade history, and P&L.
- ▶ **Backtest Playground** — test strategies on historical Kalshi 15-min data.
- ▶ **Multi-Market Ready** — start with BTC, expand to ETH, SOL, etc.
- ▶ **Notifications & Oversight** — Telegram/Discord alerts. Pause with one click.
- ▶ **Demo Mode** — practice with paper trading before going live.

WHY TRADERS LOVE FLIPPULSE

- ▶ Turn **96 daily opportunities** into passive income.
- ▶ Remove emotion from volatile 15-minute binaries.
- ▶ Proven edge in live markets — share your stats once running!
- ▶ Secure, audited connections — your funds stay on Kalshi.

Sizing scales to you. Every trade is sized as a **percentage of your balance**, so the exact same strategy works whether you start with \$500 or \$50,000 — and it compounds automatically as your account grows.

Choose Your Trading Format

Pick one to start — you can switch anytime. All sizing is a % of your balance.

Step 2 · Configure

MODE 1

Conservative

5% / trade

Capital preservation. Fewer, higher-conviction trades with the strictest entry gates.

Normal stake	5% of balance
Recovery stake	2%
Max per trade	8%
Concurrent trades	1
Ladder boost	Off
Entry gates	Strictest
Variance	Lowest

Best for: first-timers & protecting the bankroll.

MODE 2 · DEFAULT

Balanced

10% / trade

The recommended middle ground of frequency and variance for most customers.

Normal stake	10% of balance
Recovery stake	3%
Max per trade	15%
Concurrent trades	1
Ladder boost	Off
Entry gates	Doctrine default
Variance	Medium

Best for: most traders — our recommended start.

MODE 3

Aggressive

20% / trade

Edge hunter. More trades, larger stakes, and the win-rate Ladder boost switched on.

Normal stake	20% of balance
Recovery stake	5%
Max per trade	30%
Concurrent trades	2
Ladder boost	On (up to 2x)
Entry gates	Relaxed
Variance	Highest

Best for: higher risk tolerance chasing throughput.

Which format would you like to start with?

☐ Conservative ☐ Balanced (recommended) ☐ Aggressive

Starting balance you'll fund: _____ Go live now, or stay in paper mode first? _____

SIMPLE PRICING

SETUP

\$99 once

One-time white-glove setup & deployment of your bot.

MEMBERSHIP

MONTHLY

\$99/mo

Pulse Engine, live dashboard, alerts & support.
Cancel anytime.

PERFORMANCE

20% of profit

Charged only on NEW monthly profit above your prior high (high-water mark) — never twice, never on a losing month.

30-day money-back guarantee · you only pay performance when you profit · your funds stay on Kalshi.
