Automated 15-Minute BTC Up/Down Trading — Customer Setup Guide

Welcome! Getting your bot running takes about **10 minutes**. Just follow the two sections below and send us the items highlighted in **green**. We handle everything else. You'll start in **paper (practice) mode** — no real money at risk until you say go.

## PART 1 · KALSHI

- 1 Create an account at **kalshi.com**. Once it's funded, **tell us your starting balance**.
- 2 In Kalshi, go to **Account** → **Security** → **Create Key**.
- 3 **Send us both:** the **API Key** and the **PEM key** file it gives you.

## PART 2 · TELEGRAM

- 4 Download **Telegram**, then start a chat with **@BotFather**.
- 5 Send him: `/newbot`
- 6 Give your bot a name — the username **must end in "bot"** (e.g. `myname_bot`).
- 7 BotFather replies with a **token**. **Send us that token**.
- 8 Start a chat with **@userinfobot**, say hello, and **send us the ID number** it gives you back.

**Keep it private:** your API Key, PEM file, and bot token are like passwords — please send them to us through a secure channel we've agreed on, and don't post them anywhere public.

That's it — once we have your details we'll deploy your **FlipPulse** bot and confirm it's live in your Telegram.
